

1
Twist the sprayer cap loose to remove the pressure inside the bottle.

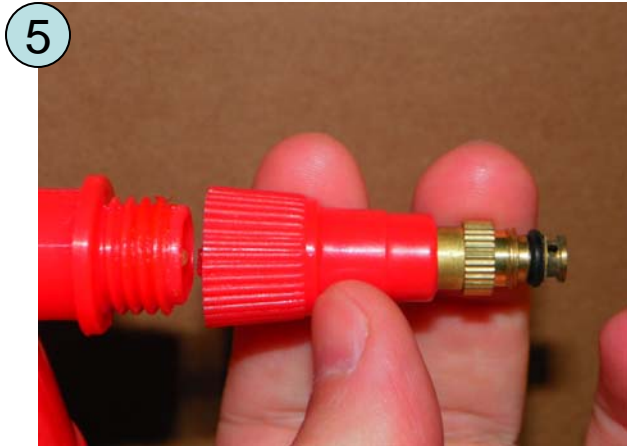

2
Remove the small metal tip by unthreading.

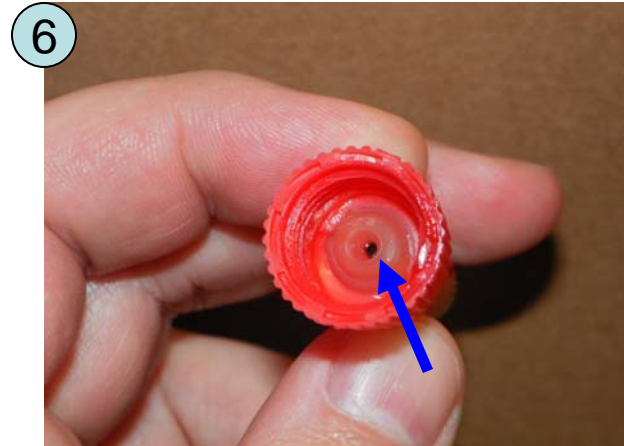

3
Scrape the inside of the nozzle if any debris exists.

4
Ensure hole in end of nozzle is clear, able to see straight through. If clogged use a toothpick or paper clip to clear the clog.

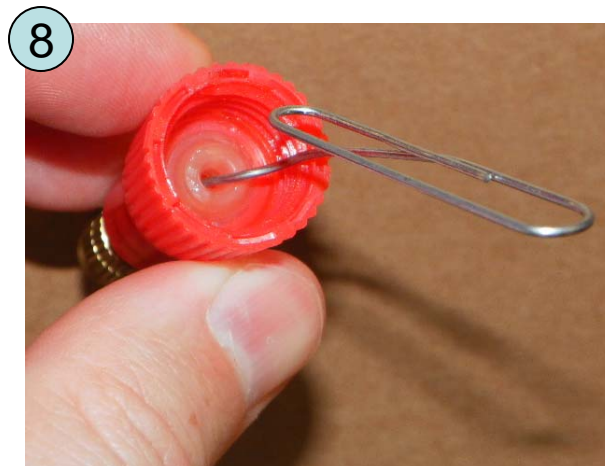

Remove red nozzle extension.

Check if orifice is clogged.

Firmly tap the end of the red nozzle extension on a table top expelling solidified product.

Alternate method for hardened clogs is to use a paper clip to clear the orifice.

Example of clogged nozzle extension.
