

The Victor logo is displayed in a bold, red, sans-serif font. The letter 'V' is significantly larger than the other letters and features a small mouse silhouette integrated into its upper left vertical stroke.

Victor® Multi-Kill™ Electronic Mouse Trap

1. Be sure the trap is in the “OFF” (O) position.
2. Insert a small amount of peanut butter (the size of a pea) against the back wall of the kill chamber. *Be sure to never place peanut butter or any other material directly on the plates as this will not allow a proper connection between the mouse and the plate.*
3. Open battery compartment and properly insert (4) C batteries.
4. Identify location with mouse activity. Place trap with stair against the wall in an area where activity has been seen.
5. Turn switch to “On” (-). Green light will flash once. Trap is working.
6. Once caught, dispose of rodent in trash receptacle.

To keep your trap in peak condition - it is important to empty your trap as soon as you see the kill indicator light flashing. Additionally, cleaning the trap by wiping the plates and drawer with a damp cloth after every 10 kills will improve the life of your trap. Do not use soaps as the scent could have a repelling effect.

CAUTION: Inappropriate use of this product may cause electrical shock, or serious injury. See product warning for additional details.
